

2Digital Technologies Application Hosting offers a secure and affordable method to access your computer applications and data anywhere, anytime. Leverage leading applications that can help increase profits and boost customer satisfaction without the usual upfront infrastructure costs — or the ongoing implementation and management headaches.

- Buying software as a service is an attractive alternative to installing and managing new applications. From simple office applications to custom database applications, 2Digital Technologies can deliver significant business benefits by helping you:
 - Reduce IT costs by buying infrastructure and management as a service, rather than investing in assets and hiring new personnel
 - Save time by avoiding program updates, software installation, service packs, and other maintenance issues.
 - Enhance flexibility. Access data anywhere, anytime, from several different computers. Multi-user access enables your employees to work simultaneously.
 - Protect data with world class backup & disaster recovery services. Continue functioning after (and during) a disaster, rather than recovering from a disaster. Putting all your eggs in one basket—or on one server—is tempting fate.
 - Improve work flow with our 24 x 7 help desk
